23. Internal Project Details

Vanguard AutoTech has several operational engineering initiatives underway:

- **Project Orion:** An initiative to transition our heavy stamping line to fully automated robotic configurations. Project Orion integrates predictive failure sensors to predict tool wear. Lead: Dr. Aris Tanaka.
- **Machine Line MX-450:** The deployment of our new high-speed CNC cutting and boring machine line, located in Bay 3 of Plant B. This line increases manifold output by 35%. Operations Lead: Thomas Kowalski. Primary Database Server: **INVENTORY-DB-05**.
- **Project Vanguard-Suspension-X:** R&D initiative to develop a lightweight carbon-composite suspension link for electric SUVs. Lead: Elena Rostova. Design server: **CAD-PROD-02**.

24. Product Documentation

Our commercial components catalog features:

- **Vanguard Heavy Suspension Link:** Double-wishbone suspension components forged from high-tensile alloy steel. Model: HSL-v9. Operating Tolerance: Up to 15,000 Newtons of force.
- **Drive Shaft Series DS-400:** Precision-balanced drive shafts designed for rear-wheel-drive light trucks. Includes maintenance-free universal joints.
- **Cast Manifold CM-22:** Exhaust manifold cast using high-nickel alloys, optimized for extreme heat dispersion and low backpressure.
